

Tomahawk GT

TURF-TYPE TALL FESCUE

Glyphosate Tolerant Turf-Type Fescue
(*Festuca arundinacea*) U.S. Patent No. 6,423,887

Developed in Oregon by Pure Seed Testing for outstanding turf quality and a 'naturally bred' tolerance to low rates of glyphosate. Ideal for areas requiring weed-free tall fescue turf.

Tomahawk GT exhibits a dark green, lower-growing turf with excellent quality for the cool-arid zone of tall fescue adaptation. Perfect grass weed control with glyphosate applications.

- Home / Commercial lawns
- Parks / Cemeteries
- Recreational / Sports turf
- Sod production
- Golf course roughs / bunkers
- Roadsides / Airport runways
- Low maintenance turf

TURFSEED, INC.

Growth Habit and Characteristics:

- Tested as PST-5MU
- Bunch-type growth habit with narrow blade width and reduced vertical growth
- Exceptionally uniform, dense turf with a dark green color
- Very deep rooted, performs well in a wide range of soil types, pH range of 5.0 to 8.0

Performance Characteristics / Adaptations:

- Moderate level of glyphosate tolerance through traditional breeding — Apply glyphosate at recommended rate
- Blends well with naturally glyphosate tolerant Pure Gold turf-type tall fescue
- Reduced vertical growth for fewer clippings
- Excellent for roughs, roadsides / Low maintenance. Wherever weed-free turf is desired
- Tolerates full sun to moderate shade
- Excellent drought / heat tolerance when compared to other cool-season turfgrass
- Outstanding variety for turf-type tall fescue sod production

Establishment and Maintenance:

- Seed at 6–10 lbs. / 1000 sq. ft. or 400 lbs. per acre
- Early fall and spring seeding are best. Avoid late spring / summer plantings in areas of high heat and humidity
- Seedbed should be kept moist during germination and establishment
- Germinates in 8–14 days with optimal soil temperatures, 60–80 degrees F. Full coverage expected in 6–8 weeks
- First mowing recommended when plant reaches 2 to 3 inches in height

Established Turf Maintenance:

- Maintain at a mowing height of 1 1/2 to 3 inches
- Best maintained with infrequent, deep irrigation to promote a deep, healthy root system
- Fertilize at annual rate of 4–5 lbs. of actual N / 1000 sq. ft.

Weed-Free Turf Program:

- Turf may be sprayed 90 days after emergence
- The cooler months of spring and fall are the best times to spray
- Tomahawk GT has a tolerance of 8–12 oz. of glyphosate per acre / .15 to .25 ounces per 1000 sq. ft. Some mild discoloration and reduced growth may briefly occur
- Use only glyphosate — no spreader or sticker
- Ideal for turf, roadsides, and erosion applications
- Perfect companion to glyphosate tolerant Pure Gold turf-type tall fescue
- Read and follow all glyphosate Pro label recommendations for application
